linkedin.com/in/vladislav-cupnii

Fullstack developer with 8+ years of experience across business software, travel, hospitality, and investment platforms. Combines React and Next.js expertise with Node.js backend development and technical leadership. Delivered a live investment platform, led teams of up to five people, and built a shared UI library used across 10+ projects. Hands-on responsibility for architecture, hiring, delivery planning, and infrastructure.

CORE SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, React Native, HTML, CSS/SCSS

Backend and data: Node.js, Express.js, REST APIs, MongoDB, Redis, Firebase/Firestore

UI and tooling: Redux, Effector, RxJS, MUI, Mantine, Storybook, Playwright, Vite, Webpack

Delivery: Git, Docker, GitHub Actions, CI/CD, architecture, hiring, estimation

PROFESSIONAL EXPERIENCE

Doc Space

Senior Frontend Developer | Nov 2024 - Present

- Own frontend architecture and technical decisions for two R7 business workspace services: Administration and Contacts, from feature planning through implementation.
- Build interfaces for user and group management, service settings, permissions, and restrictions, alongside the workspace contact management application.
- Created a shared React and Mantine npm library adopted across 10+ projects, moving themes, widgets, and common components out of separate repositories into a reusable package.
- Documented the component library in Storybook and synchronized design tokens from Figma within a unified theming architecture.
- Work with technical leads and product managers to define requirements, decompose features, and estimate delivery effort.

Unicorn

Technical Lead / Fullstack Developer | Aug 2025 - Aug 2026

Contract project alongside full-time employment | Investment platform

- Built and launched the platform end to end: a React/TypeScript customer portal and admin application, plus a Node.js/Express backend backed by Firebase/Firestore.
- Implemented purchases, installment schedules, balance management, transfers, withdrawals, dividend calculations, and payment API/webhook integrations.
- Developed authentication, document verification workflows, and admin tools for managing users, transaction requests, pricing, and promotions.
- Implemented scheduled installment maintenance and notification workflows; delivered a customer interface localized into 10 languages.
- Recruited frontend, QA, and design specialists and led a five-person team including myself; owned architecture, task decomposition, estimates, and delivery coordination.
- Configured hosting, servers, and domains; set up Docker and GitHub Actions for development and production deployment, plus frontend pull request previews.

PROFESSIONAL EXPERIENCE CONTINUED

KIVORK

Senior Fullstack Developer | Apr 2024 - Nov 2024

- Developed a travel and ticketing platform using Next.js, later React, and an Express.js/TypeScript backend-for-frontend layer.
- Built services to retrieve and locally persist upstream data for faster access, with MongoDB also storing website-owned data. Implemented Redis cache refresh and invalidation for prices, tickets, destinations, and other travel data.
- Configured WordPress and built an API to retrieve pages produced with its page builder. Added page versioning, review before publication, and live rollback when issues were found after release.
- Created a Playwright-based tool that replicated 5,000+ pages across 60+ page types as complete interactive copies, preserving listing-to-article navigation, image sliders, anchors, and forms.
- Built a Chrome extension embedded into sales agents' web applications. Captured chat context per message and exchanged data via a background script and WebSocket with a separately developed backend to display suggested replies.

WebProfy

Jan 2021 - Mar 2024 | Progressed from Frontend Developer to Technical Lead

Technical Lead | Jan 2023 - Mar 2024 | Onlog System

- Led a three-person team developing a React logistics cost calculator as modular widgets embedded into a Bitrix website.
- Analyzed and audited logistics calculation rules and dependencies, translating complex business requirements into a development plan and interconnected widget interfaces.
- Built a business formula editor allowing users to define, describe, and reuse custom variables. Added interactive formula checks and integrated the editor with backend services that executed the configured calculations.

Frontend Developer / Middle+ | Jan 2021 - Jan 2023 | Noovy

- Developed Next.js features for Noovy, a hotel management platform, covering reservations, rooms, and meal plans over two years of product development.
- Built interactive calendars and data-heavy tables to support hotel operations, implementing domain-specific business rules across connected workflows.

EARLIER EXPERIENCE

Laaty Solution | React Native Developer | Aug 2020 - Dec 2020

Developed a React Native mobile app for creating and completing family tasks.

Gamega | Frontend Developer | Sep 2019 - Aug 2020

Developed the frontend for a mystery shopper service used to assess sales quality.

Rich Code | Bitrix Developer | Feb 2018 - Sep 2019

Built online stores, landing pages, and corporate sites; configured Bitrix and adapted templates.

EDUCATION AND LANGUAGES

Bachelor's degree in Software Engineering | 2013 - 2017

Transnistrian State University

English - B2 | Russian | Ukrainian
